Good afternoon Stella and Litty,

I hope your week is going well! We have a few project updates for you.

Environmental and wind measurement studies

Community members may see contractors in the Port au Port area over the coming weeks and months, conducting the environmental studies and wind measurement preparation.

As part of the environmental assessment process, we have contractors who have begun the environmental studies in the Port au Port area and will soon start in the Three Rivers / Flat Bay / Codroy Valley area as well.

As part of the crown lands process, we are starting the preliminary investigative work, including wind measurement. You will see five wind measurement towers set up in the Port au Port area over the next few weeks.

Household mailout

We've sent an information brochure to households on the Port au Port Peninsula (and as far east as Kippens). Please find attached the first in a series of mailouts. The piece will be folded in half. Residents can expect to see this piece in their mailboxes this week.

Public opinion research (MQO Research)

I know there is a lot of talk about public opinion polls in your communities, so I wanted to share with you that [MQO Research](#) conducted a study across the province in September regarding green energy development, and they found there is very high support for green energy development and for onshore wind development, in particular.

For your reference, I've attached a one-page summary of the findings, and you can download the full findings and questions here: <https://we.tl/t-W4ADqbjXl>

Community Vibrancy Fund

Please feel free to share the details of the CVF with your community members. If you have any questions, please reach out anytime.

Let me know if you have any questions.

Thanks so much!

Laura
